DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-7 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 14, 15, 17, 18, and 31 of U.S. Patent No. 6,306,159. Although the conflicting claims are not identical, they are not patentably distinct from each other because they claim, inter alia, first and second anchors and a suture, where the suture adjustably connects the anchors, whereby tension on the suture pulls the second anchor toward the first anchor to close a tissue or meniscal defect, and where the first anchor is cannulated and has a locking mechanism for the suture, and the second anchor has a hole.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Colvin et al. (6,066,160). Colvin et al. disclose, at least in figures 1-5, a device including a cannulated, first anchor (e.g., 10) having a locking mechanism (e.g., 20) configured to grip and hold a suture at any point along the suture, a second anchor (40) having a hole, and a suture (16), where the suture connects and first and second anchors by passing through the first anchor cannulation (14A) while traveling in a first direction, by passing through the second anchor hole, and by returning through the first anchor cannulation (14B), and where the first anchor is shaped (a circular, disc-shape) to seat below a first surface of a meniscus. Note: The introductory statement of intended use ("for repairing a defect in soft tissue" or a meniscus) has been carefully considered but deemed not to impose any structural limitations on the claims patentably distinguishable over the device of Colvin et al., which is capable of being used as claimed if one desires to do so.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pierce (4,823,794) teaches a device usable for repairing a defect in soft tissue.
